AG-27-T Single Full Height Turnstile

General Product Description

The AG-27-T is a heavy-duty full height high security turnstile with a 27" passage. The function of the AG-27-T is to provide controlled access when entering or exiting a facility where pedestrian traffic is present. It can achieve this both mechanically (no access control system/software) such as a pool gate where the passage would be used for only exiting and no entry. Or electronically (with an access control system, card readers, fingerprint readers etc.) for keeping track of who is on and off site. It is manufactured with American Pride right here in the USA.

AG-39-T Single Full Height Turnstile

General Product Description

The AG-39-T is a heavy-duty full height high security turnstile with a large 39" passage. The function of the AG-39-T is to provide controlled access when entering or exiting a facility where pedestrian traffic is present. It can achieve this both mechanically (no access control system/software) such as a pool gate where the passage would be used for only exiting and no entry. Or electronically (with an access control system, card readers, fingerprint readers etc.) for keeping track of who is on and off site. It is manufactured with American Pride right here in the USA.

AG-30-TT Tandem Turnstile

General Product Description

The AG-30-TT Tandem Turnstile is a heavy duty full height high security turnstile. A tandem turnstile is essentially two turnstiles in one and has a smaller foot print than two single turnstiles put together. The function of the AG-30-TT Tandem Turnstile is to provide controlled access when entering or exiting a facility where high flow traffic is present. It can achieve this both mechanically (no access control system/software) such as a pool gate where the passage would be used for only exiting and no entry. Or electronically (with an access control system, card readers, fingerprint readers etc.) for keeping track of who is on and off site. It is constructed with American Pride right here in the USA.

PORTABLE TANDEM TURNSTILE AG-30-TT

General Product Description

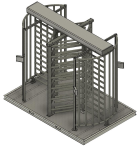

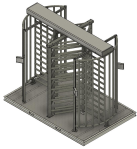

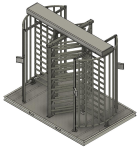

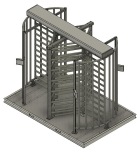

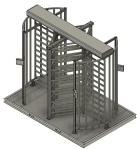

The Portable Tandem Turnstile AG-30-TT, paired with our Portable Base Model 72-108-PB, is the ultimate solution for secure and flexible access control. Designed for industries that demand mobility and reliability, this turnstile system is perfect for construction sites, temporary events, and locations where permanent installations are not practical.

AG-36-ADA

General Product Description

The AG-36-ADA is a heavy-duty full height high security ADA gate with a 36" passage. The function of the AG-36-ADA is to provide controlled access as well as egress and an ADA compliant passage when entering or exiting a facility where pedestrian traffic is present. It is designed to be used in conjunction with Outlaw Turnstiles and has provisions to bolt directly to them. It is manufactured with American Pride right here in the USA.

AG-48-ADA

General Product Description

The AG-48-ADA is a full height ADA compliant gate is designed with security and simplicity in mind. Ideal to place next to one of our Full Height Turnstiles with hardware to attach, It can be configured a number of ways. A door strike with panic bar, magnetic lock with push to exit button, or a typical door handle with a key and mortise lock. With tough welded steel or stainless-steel construction, a #9 mesh to resist tampering, and a heavy duty fully adjustable hydraulic self-closing hinge, this gate is sure to stand the test of time.

ANTI REACH BARRIER

General Product Description

The anti-reach barrier is an accessory designed to be used in conjunction with an ADA gate and turnstile. An anti-reach barrier should always be used when installing an ADA gate next to a turnstile to prohibit someone from reaching through the bars on the turnstile and opening the ADA gate by pushing on the panic bar from the outside. It can also be used to make the ADA gate sturdier if standing alone or on a portable base.

Remote Lane Control for Optical Turnstiles

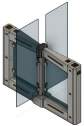

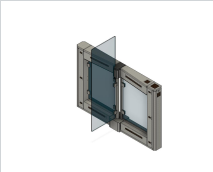

General Product Description

The Remote Lane Control for Optical turnstiles consists of a computer that connects to the lane array via ethernet cable. The remote touchscreen PC enables centralized control and monitoring of all lane functions and statuses. This powerful feature provides operators with real-time insights and the flexibility to configure and adjust the turnstile settings with ease. Additionally, the PC allows for remote troubleshooting via internet connectivity, ensuring quick resolutions and minimizing downtime.
